

DOWNPOUR

Quenching Agent

Contact EnforcerOne for more details at 678.788.8413 or info@enforcerone.com

PRODUCT INFO:

DownPour quenching agent is a water-based formulation that rapidly cools dangerous temperatures in service, welding, and manufacturing. Minimize service wait times with DownPour, a cooling application that can reduce dangerous temperatures on hot metal parts with no warping or corrosion. Add DownPour concentrate to water to create a solution you can depend on to speed service projects and maximize efficiency. DownPour is a great addition to service garages, mobile service trucks, and even metal fabrication. Use in welding, soldering, mechanical repair, and more.

A small addition of DownPour concentrate to a water mix allows for rapid cooling of metal and other surfaces without corrosion or warping. DownPour pressure sprayer offers a multitude of spray types from fine mist to soaking spray. Hot metals must be soaked for a continual duration to quickly lower the temperature and drop hot metals to a safe, touchable temperature within minutes. DownPour evaporates with no mess or residue. DownPour is not slick or sticky.

Part Numbers

QTY 6 Minimum
32 oz Concentrate:
#DWP-32oz

Qty 6 Minimum
48 oz Pressure Sprayer:
#48ozPressureBottle

PHYSICAL PROPERTIES

Appearance: Natural Amber
PH: 7.5-8.5
Viscosity: 2.382 cps
Min. Storage Temp.: 35°F (2°C)
Max Storage Temp.: 120°F (49°C)
Effects of Freeze/Thaw: None
Shelf-Life: Unlimited
Non Flammable: Can be mixed with FIREBULL® products for firefighting operations

Associated Products
